ShaftSafe®

AIR SHAFT PRESSURE MONITORING

LEARN MORE

ShaftSafe® is the industry's first real time air pressure monitoring system for Double E Group air shafts and bladder chucks.

Engineered specifically for the converting industry, ShaftSafe® allows operation and production personnel to monitor critical air pressure for every shaft or bladder chuck on a production line.

ShaftSafe® guarantees consistently accurate and repeatable inflations to increase safety and productivity on all your production lines.

ShaftSafe® monitors inflation and will immediately alert production personnel to any pressure loss or slow leaks that indicate that equipment requires maintenance. This allows for planned downtime and preventive maintenance.

WHAT ELSE?

- **End Core Slippage Forever**
- **Reduce Costly Waste**
- **Increase Safety**
- **Analytics**
- **Predict Preventive Maintenance**

FEATURES

- Easy, Bluetooth connectivity
- Real time monitoring of air inflation, deflation and operating pressures
- Double E Group air shafts and bladder chucks come ShaftSafe®-ready
- Audible and Visual alarms alert operator to pressure changes and leaks
- User-determined minimum and maximum pressure alarm levels
- Simple user interface on full-color touch screen
- System integration-ready
- Retrofittable to your existing Double E Group air shafts
